

The Chicago Health, Environmental Exposure and Recreation Study (CHEERS) is a prospective cohort study of water quality and the health risks of water recreation. Further information about the project is available at www.cheerschicago.com. A student in biostatistics is sought as a research assistant to work as a data analyst. The data analyst will work under the direction of the investigators and the statistician. Candidates should have finished at least a year of statistics/biostatistics course work, be familiar with logistic regression models, mixed effects regression models, and survival data analysis, have experience in SAS programming and manipulations of large data set. Interested student should send your CV to Dr. Li C. Liu (liliu@uic.edu).
