Creating Audio-Enhanced PowerPoint Presentations, Easily, with Impatica

Margaret Noyes
Public Health, Mental Health, and Administrative Nursing

Edward Campbell
Instructional Technology Lab

What is Impatica?

- Impatica for PowerPoint is a software tool that allows Microsoft PowerPoint presentations to be played over the Internet without plug-ins, at modem speeds as low as 28.8 kbps.
- Specifically, Impatica for PowerPoint is a standalone translator program, which runs on Windows 98/NT/2000/Me/XP.

How does Impatica work?

- Impatica reads and interprets the PowerPoint file and produces a compressed file that can be streamed over the Internet. (Compression is key to Web content).
- Impatica extracts the various multimedia elements and converts them into a more efficient format for web delivery.

How does Impatica work?

- The new "Impatica" file (.imp) can then be read by Impatica's Java player applet ("ImPlayer") and played in real time while the file is streaming over the Internet.
- Once you have created the Impatica version of your presentation, it can be played from any HTML web page or from within an e-mail message. No special server side software is required.

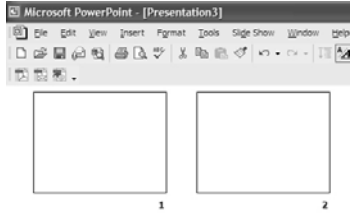

What can I use Impatica for?

- Add narrated presentations to your web site or e-mail
- Deliver fully narrated and animated PowerPoint presentations to any Internet device without plug-ins and even at normal modem speeds.

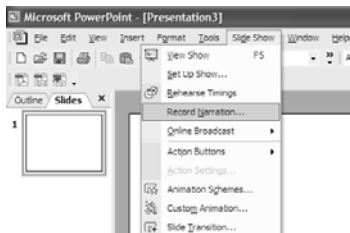

Miscellaneous Info

- Impatica converts the PowerPoint file into a compressed format that is optimized for streaming over the Internet. The Impatica file is typically 95% smaller than the PowerPoint HTML files. (Key to the Web)
- Impatica for PowerPoint supports most of the features of PowerPoint, including text, graphics, transitions, animation effects and, of course, narration.
