

Ambrosia trifida

GIANT RAGWEED GREAT RAGWOOD (Composite Family)

in the **Peacock Prairie** at the **James Woodworth Prairie Preserve**

Green flowers in racemes 1-6" high. Leaves with 3-5 deep lobes or rarely entire. 3-15' high (91-460 cm). At the Peacock/Woodworth Prairie blooms about the 2nd week of August through the 4th week of August. While a native species, the large specimens of *Ambrosia trifida* GIANT RAGWEED are culled due to aggressive growth. This photographed specimen is very short because it is a 'leftover' after culling.
