

**DEPARTMENT OF PHYSIOLOGY AND BIOPHYSICS
UNIVERSITY OF ILLINOIS AT CHICAGO**

RESEARCH INTERESTS FORM

RESEARCH INTERESTS: Answers to the following questions will aid assignment of applicants accepted for graduate study to faculty advisors on the basis of common research interests. However, interest in a particular research area is not a requirement for acceptance and applicants with only general interests in Physiology should indicate this.

Do you feel that you are familiar enough with the various areas in physiology to choose a research area immediately upon entering graduate school?

Is there a particular area in which you are primarily interested and well-read?

Is there a staff member in the Department of Physiology whose work you have followed and with whom you wish to do your graduate research?

Would you describe yourself at the present time as being open to most areas of research in physiology (i.e., is the area of research of secondary importance now)?
