---

# Maternal and Child Health

The material in this workbook was developed initially for:

*DEAL MCH: Enhanced Analytic Skills Program*  
(DHHS/PHS/HRSA/MCHB) (MCU-17D501-03-2)

**Arden Handler, DrPH**  
*Principal Investigator & Core Faculty*

**Deborah Rosenberg, PhD**  
*Core Faculty & Co-Project Director*

**Joan Kennelly, RN, MPH**  
*Core Faculty & Co-Project Director*

**Colleen Monahan, DC, MPH**  
*Core Faculty*

This workbook is published in collaboration with:

*MCH-Info: Analytic Software Tool for Needs Assessment*  
(DHHS/PHS/HRSA/MCHB) (MCJ-17D601-03-0)

**Colleen Monahan, DC, MPH**  
*Principal Investigator*

**Division of Science, Education, and Analysis**  
**Health Resources and Services Administration - Maternal and Child Health Bureau**

**UIC** University of Illinois at Chicago

Production Coordinator: Margaret M. Maloney  
Desktop: Wendi Thourson & Christopher Tedin  
Cover Design & Graphs: Jason Millet

Published May 1998

<i>Preface</i>	vii
<i>Acknowledgements</i>	viii
<b>Enhancing Analytic Capacity in State Health Agencies through Competency-Based Education</b>	ix
<i>Arden Handler, DrPH</i>	
<b>Epidemiology and Biostatistics, Modules 1, 2, and 3: Introduction</b>	1
<b>Module 1: Descriptive Epidemiology and Statistical Estimation</b>	3
<i>Deborah Rosenberg, PhD and Arden Handler, DrPH</i>	
Epidemiologic Concepts	3
Person, Place, and Time Characteristics	4
Person Characteristics	4
Place Characteristics	7
Time Characteristics	7
Statistics Used in Public Health	10
Types of Variables	10
Means and Proportions	12
Rates	15
Prevalence and Incidence	18
Choosing Statistics to Report	22
Defining Categories	25
The Sampling Framework	29
Evaluating the Accuracy of Statistics	32
The Mean and Variance of Probability Distributions	34
Means and Variances for Means, Proportions, and Rates	34
The Central Limit Theorem	39
Confidence Intervals	39
Choosing the Best Estimates	43
The Epidemiologic View of Best Estimates	43
Biases Due to Collecting Information from a Select Population	44
Biases Due to Measurement of Information	44
<b>Module 2: Measures of Association and Hypothesis Testing</b>	47
<i>Deborah Rosenberg, PhD and Arden Handler, DrPH</i>	
Measures of Association: Difference Measures	48
Two Independent Means	48
Two Independent Proportions	50
The Attributable Risk	56
Hypotheses about a Mean, Proportion, or Rate in Comparison to a Standard	61
Measures of Association: Ratio Measures	63
The Relative Risk, the Relative Prevalence, and the Odds Ratio	63
The Preventive Fraction	71
Ecologic Analysis	73
Final Notes on Interpreting 2×2 Tables	74

<b>Module 3: Analytic Epidemiology and Multivariable Methods</b>	77
<i>Deborah Rosenberg, PhD and Arden Handler, DrPH</i>	
Research Designs in Analytic Epidemiology	77
Cohort Study	78
Case-Control Study	79
Data from the Entire Population	79
Ecologic Designs	80
Designs for Program Evaluation	81
Choosing a Study Design	81
Adjustment for Confounding	86
Steps in Evaluating Confounding Based on Analysis of 2×2 Tables	87
Evaluating Effect Modification Based on Analysis of 2×2 Tables	88
Confounding and Standardization of Rates	92
Direct Standardization	95
Indirect Standardization	95
Synthetic Estimation	100
Overview of Multivariable Regression Methods	104
Epidemiology and Biostatistics: Exercises and Solutions	115
References for Epidemiology and Biostatistics	135
<b>Module 4: Methods for Summarizing Data</b>	137
<i>Deborah Rosenberg, PhD</i>	
Developing an Analysis Plan	137
Purpose of the Analysis	138
The Audience for the Analysis	139
Availability of Data and Data Quality	139
Variables, Methods, and Presentation	140
Methods for Increasing Interpretability	143
Categorization	143
Integer Ranking	147
Percentile Rescaling	148
Z-Scores	153
Z-Tests	157
Index Construction	163
Summarizing Data to Allocate Resources	168
Methods for Summarizing Data: Exercises and Solutions	173
<b>Module 5: Methods for Analyzing Trend Data</b>	191
<i>Deborah Rosenberg, PhD</i>	
Why Do Trend Analysis?	194
Preparing to Analyze Trend Data	195
Analysis of Trend Data	199
Data Transformation and Smoothing	203
Reporting Average Annual Percent Change in an Indicator	205
Statistical Procedures	207
Chi-Square Test for Linear Trend	207

Regression Analysis	208
Other Considerations When Selecting Graphing or Statistical Approaches	215
Trend Analysis and Use of Local, State, or National Objectives	219
Presentation of Trend Data	220
Summary	221
Technical Note on Confidence Bands and Confidence Limits	222
Methods for Analyzing Trend Data: Exercises and Solutions	225
Selected Bibliography for Methods for Analyzing Trend Data	229
<b>Module 6: Creating Target Population Estimates Using National Survey Data</b>	<b>233</b>
<i>Colleen Monahan, DC, MPH</i>	
Describing Target Population Characteristics for Children with Special Health Care Needs	233
Who Are Children with Special Health Care Needs?	234
Diagnosis-Based Approach	235
Function-Based Approach	235
Service-Based Approach	236
Classification Systems for Disability	236
The National Advisory Board on Medical Rehabilitation Research Model	236
International Classification of Impairment, Disabilities, and Handicaps (ICIDH)	237
Institute of Medicine/Saad Nagi Model	237
Other Models or Definitions of Disability	237
Framework Proposed by Ruth Stein, et al for the QuiCC	237
National Association of Children's Hospitals and Related Institutions (NACHRI) Classification System	238
Definition from the Federal Bureau of Maternal and Child Health	238
Definition Using State Program Eligibility	239
Americans with Disabilities Act (ADA)	239
The Physical-Mental Continuum	239
The Role of Sociodemographic Factors in Estimating Disability	240
Sources of Data on Disability	240
The Census Bureau	240
The National Center for Health Statistics	240
Using National Data to Develop Synthetic Estimates	243
Creating a Synthetic Estimate	243
Potential Biases Associated with Creating Synthetic Estimates	244
Creating Target Population Estimates Using National Survey Data: Exercises and Solutions	246
References for Creating Target Population Estimates Using National Survey Data	256
<b>Module 7: Using Census Data in MCH</b>	<b>257</b>
<i>Colleen Monahan, DC, MPH</i>	
Description of the Census	258
History of the Census	258
The Evolution of the Census	259
The 1990 Census	259
Census in the Year 2000	260

The Modern Census	260
Census Content and Sample Design	261
Short Form	261
Long Form	261
Census Geography	263
Dissemination of Census Products	264
Printed Reports	264
Computer Tapes	265
Summary Tape Files (STFs)	265
Main Features of Summary Tape Files	265
Public Use of Microdata Samples (PUMs)	265
Other Special Computer Tape Files	266
Microfiche	266
CD-ROM	266
Special Tabulations	266
Online Services	266
Maps and Geographic Files	267
Machine-Readable Geographic Files	267
Using Census Data for Demographic and Socioeconomic Analysis	267
Demographics	267
Socioeconomic Data	268
Socioeconomic Indicators	269
Summary of Technical Issues for Calculating Totals and Percents Using Census Data	270
Summary of Commonly Used Formulae	271
Index	277
