University of Illinois at Chicago
Chicago, Illinois 60607

General Instructions

The paper's title should be centered on the first line of the first page. This should be followed by the author's full name and professional address.

Each manuscript should begin with **Abstract and Introduction** sections, and end with a **Summary and Conclusions** followed by **References** and any required **Appendices**. All major headings should be typed in bold face, and separated from the text by a single blank line.

The manuscript must be word processed on 8.5 x 11 in. (21.6 x 27.9 cm) pages that conform to the indicated margin format. The first page of the manuscript should have a 1.5 in. (3.8 cm) margin at the top, and 1 in. (2.5 cm) margins at the left, right, and bottom. All additional manuscript pages should have 1 in. (2.5 cm) margins on all boundaries.

All text should be single-spaced. Use the equivalent of 12-point type. These instructions have been prepared in Times New Roman Regular 12 point type.

Page Numbering

All pages of your manuscript should be numbered on the upper right hand corner of each manuscript page consecutively.

Figures

All figures should be high-quality drawings placed into the text where they best fit with the descriptive text. Please avoid the practice of grouping all figures at the end of the manuscript. Figures and text may appear on the same page, and authors are encouraged to use this approach to generate an aesthetically appealing paper. Figures must be numbered consecutively, and captioned. The Figure numbers and captions should appear directly below the figures. Please make sure that all figure lettering is large and dark enough to be legible.

If photographs must be included, they should be pasted into the manuscript where they will appear. All photographs should be numbered and captioned as figures.

Tables should be placed in text where they best fit with the descriptive text. Tables must be numbered consecutively, and captioned. The table numbers and captions should appear directly above the table.

Please note that if a figure or photograph has been published previously, it will be necessary for the author to obtain written approval from the original publisher to reprint the figure or photograph. A form letter that may be used to obtain this permission has been attached. All required approvals must be submitted with the camera-ready manuscript.

Mathematics

All mathematics included in the text should have typed characters if possible. Equations should be numbered consecutively, centered, and separated from the text by a single blank line. Equation numbers should be "tabbed" to line up with the manuscript's right margin.

Systems of Units

The use of SI units is encouraged. When preference is given to SI units, no other units are required. When non-SI units are used, reference should also be made to the corresponding SI units by including them in parentheses following non-SI units. A complete guide to the SI system and its use may be obtained from the American Society for Testing Materials (100 Barr Harbor Drive, West Conshohocken, PA 19428-2959).

References

All references should appear together at the end of the manuscript in a section titled **References**. References should be listed alphabetically by the last name of the first author. They should also be numbered consecutively. References should be cited by the "name/date" method (e.g. Bear, 1979). If the reference has two authors, the last names of both authors should be used (e.g. James and Rubin, 1979). If the reference has more than two authors, only the first author should be used (e.g. Baek et al., 1989). All references must be cited in the manuscript text. In general, each citation should give the authors' complete names, the year, the work's complete title, and all essential publisher information. Avoid unnecessary abbreviations. Refer to the following format examples for additional details.

1. Baek, N. H., Ciesceri, L.S. and Clesceri, N. L. (1989), "Modeling of Enhanced Biodegradation in Unsaturated Soil Zone", **Journal of Environmental Engineering**, 115(1), 150-171.
2. Bear, J. (1979), **Hydraulics of Groundwater**, McGraw-Hill Inc., N.Y.
3. James, R. V. and Rubin, J. (1979), "Applicability of the Local Equilibrium Assumption to Transport Through Soils of Solutes Affected by Ion Exchange", in **Chemical Modeling in Aqueous Systems**, E. A. Jenne, ed., American Chemical Society, Washington, D.C., 225-235.

Approvals and Copyright Transfer

It is the author's responsibility to obtain all necessary approvals from the author's employer, etc., prior to the submission. Please use the Publisher's Reprint Approval Form signed.

The transfer of copyright form must be completed by the author. No paper can be included in the Proceedings unless a transfer of copyright form has been received.

Please mail signed originals of both the forms to:

Krishna R. Reddy,
Department of Civil and Materials Engineering
University of Illinois at Chicago
842 West Taylor Street
Chicago, Illinois 60607

Delivery Deadline

All manuscripts must be submitted electronically by August 30, 2003 by email to Dr. Krishna R. Reddy at kreddy@uic.edu

Please call Dr. Reddy at (312) 996-4755 if you anticipate any difficulty meeting this deadline. The proceedings will be reproduced posted on the workshop webpage and also published at the end of the workshop. Manuscripts that are not submitted prior to the publication deadline will not be included in the proceedings.
