

Building Interdisciplinary Research Careers in Women's Health (BIRCWH)

A Seminar Presentation

Bridging Scientific World Views: Translation from Cells to Society

This presentation will:

- Provide for dialogue on how health sciences disciplines differ in their world views and what it takes to create mutual appreciation in the interest of interdisciplinary scientific collaboration.
- Reveal inspiring examples of translating knowledge from basic bench science (cells) to clinical applications (society).

Presenters:

Joan L. Shaver, PhD, RN, FAAN, Professor and Dean of the UIC College of Nursing. Educated as a basic scientist and now a bio-behaviorist, for over two decades Dr. Shaver has conducted research in women's health focused on stress and sleep-related issues, including insomnia and fibromyalgia/chronic fatigue syndrome in midlife women.

Dr. Karen Colley, PhD, Professor in the Department of Biochemistry and Molecular Genetics and Associate Dean for Graduate Research and Education in the College of Medicine. Prolific in basic science, Dr. Colley is elucidating the signals and mechanisms of protein subcellular localization and modification.

Monday, January 28, 2008
3:00 ~ 4:00 p.m.
